

The Genogram Game

As a team, please create a genogram for the following family. Please be sure to indicate emotional relationships with the symbols we learned in class and create a key for any other information that does not have assigned symbols.

1. The Pritchett Family: Claire is married to Phil. Together they have three biological children, in order: Haley, Alex (f), and Luke. Claire has a younger brother, Mitchell, who lives with his partner Cameron. Together they have an adopted daughter, Lily. Claire and Mitchell's father is Jay, who is divorced from their mother DeDe. After the divorce, Jay remarried to a woman named Gloria. Gloria was previously married to Javier, and together they had one son, named Manny. Mitchell and DeDe have a fused relationship, while DeDe's relationships with Jay, Gloria, and Claire are all rocky. Two of the children in this family exhibit high IQ levels, Alex and her step uncle Manny. The main nuclear family of Claire includes herself, Phil, and her three children.
